

Termites

TERMITE BAITING PROGRAM featuring

The Sentricon® System gets to the heart of the termite problem – it attacks and destroys the entire colony for good.

No queen. No colony. No problem.

Sentricon retains its effectiveness 100% of the time with ongoing service. With continued service the Sentricon System remains baited with Recruit HD bait after colony elimination, to intercept and then eliminate future termite infestations on the property. You can appreciate having peace of mind about termite protection.

How it works:

Baited Sentricon stations are placed around the perimeter of the property, flush with the ground. These stations deliver Recruit HD termite bait, a highly palatable bait that termites prefer and share with their nestmates until the colony is eliminated.

TERMITE MANAGEMENT PROGRAM featuring

Ace will apply directed liquid treatments to selected areas around the perimeter of your home where termite activity is present. The product used during this treatment have both an ingestion and contact effect on subterranean termites. Termites will unknowingly pass through the material, become infected, and transfer the material to other termites in the colony.

If new termite activity is detected, Ace will treat the termites at no additional charge as part of the Ace Termite Management Program. The effected areas will be treated with directed treatments to combat new termite colonies.

If elected termite monitoring stations may be installed around the perimeter of the property. The stations serve as an early warning system for termite activity. These stations will be inspected every six months to monitor for foraging termites.

The interior of the property will also be inspected once per year.

We also provide solutions for:

Ants | Spiders | Roaches | Rodents | Bed Bugs | Mosquitoes | Moles | Birds | Bats | Bees | Fleas
